

Networx WhitePaper v1.0

Self Governing
Communities Powered By
The People

Built on the Ethereum blockchain

August 23, 2017

Abstract

In this white paper the Networx team will be giving an overview of our platform, Networx, a decentralized, self governing autonomous, platform where internet citizens can take part in building and creating their own "Network," that will be built upon our infrastructure. We will provide users with core functionalities and necessities needed to build their own Network. Users will be able to buy "land" and proceed to build whatever they wish. Users will be able to rank, rate, and sort through various other networks as they please. Networks will be expandable and can also be built on by other users if the creator wishes.

The Networx Token

In correspondence to Networx the platform, we will also introduce the Network token. The token can be used to buy land to create a network, send to other users, as well as participate in community wide events hosted by the Networx team.

Introduction

With the inception of the internet came along new ideas and applications of decentralization and peer-to-peer contact. Even today we see these ideas ferment and take form in start up tech companies advertising innovative technologies promoting decentralization and threatening to wreck havoc against big companies. These start ups and new companies are providing services that are a significant increase from their predecessors. However, customers are still subject to these companies and applications extracting fees. Along with that customers and users have little to no say in production and future ventures. Users cannot participate in the creation and the advancement of these applications and platforms, therefore these platforms resort back towards centralization and once again forget to put their users ahead of them, and don't allow them to have any input. This is a problem that the Networx team looks to fix. We are introducing revolutionary ideas and technology that looks to bring power back to the people. New and old, big and small companies continuously overlook the consumer and customer to chase the earnings and money. The Networx team is giving the citizens of the internet the ability to control and to create whatever they would like with no intermediaries and no third parties or middle men.

Networx

Networx are communities and hubs that are decentralized "networks" that are built by individual users that is built upon our infrastructure. Users can buy "land" using the Networx Token which then allows them to start working on their network. Users can make a vast assortment of things on our infrastructure, such as; marketplaces, forums, social media sites, instant messaging applications, exchanges, hubs, video sharing platforms, etc. Users will have all the necessary components needed to make their network to the fullest extent. Users will be in complete control of their networx, and their creation will have no presence monitoring or moderating them. Networx are self governing and completely decentralized. Every network follows the same functionalities however. Each network will be ranked, rated, and will be able to be searched with ease. Other users may browse these networx and interact with given ones. Network creators however will be able to make their creation private which then only allows them to view and use their work. Networx will fall under categories which will allow other users to visit and use them easily. Networx that are the most trustworthy, and most visited, will be highly rated and will have a good reputation.

Networx Cont

Network creators may allow for their creation to be made public and available for reconstruction. This allows other users to copy another users network and modify it to their liking. These users however may charge a fee so other users may need to pay a sum to be allowed to modify.

What does the Networx Team do?

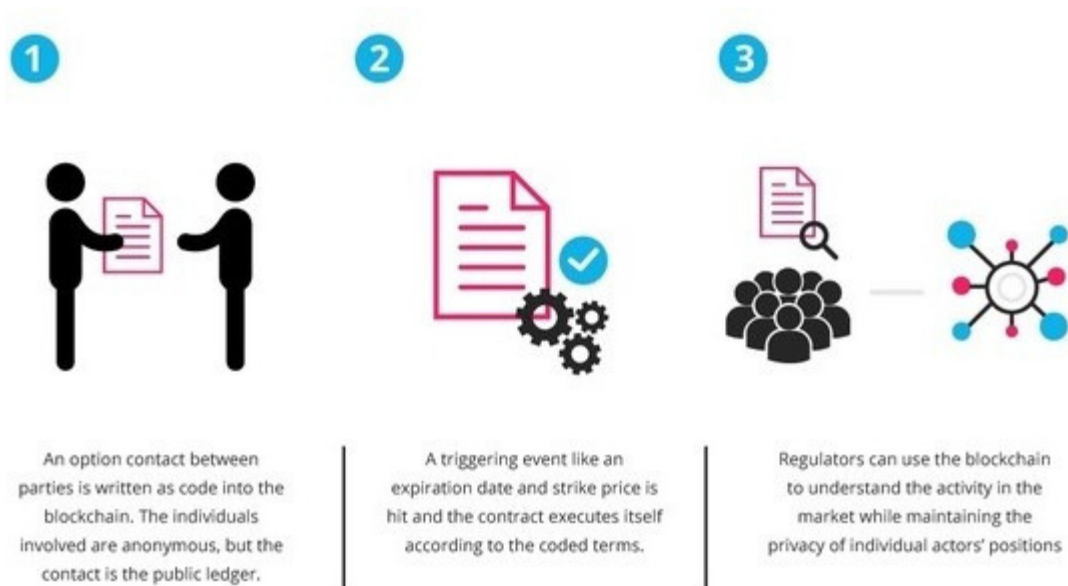

Our team will be working around the clock helping users set up their network, answering questions, adding new layouts and building the infrastructure. Everything that goes on in individual network will not be out jurisdiction. Users will make rules, and settle disputes in each individual network.

Community Events

The Networx team is all for community driven projects and events. Every so often the team will host an event where teams of users will compete to see who can make the best network in an allotted amount of time. Users then vote using our Networx token on who had the best creation, and the winning team will win an award along with having their network made public. The Networx team every week will select the Network of the week, where we select our favorite network for that week, the network will receive a special award from the team as well. Another community wide event is one where users will vote on what they want the Networx team to add next. The Networx team is all about giving the power back to the people. Networx is just as much yours as it is ours. Users will vote using our Networx token on suggestions and ideas on what the Networx team should do.

Infrastructure

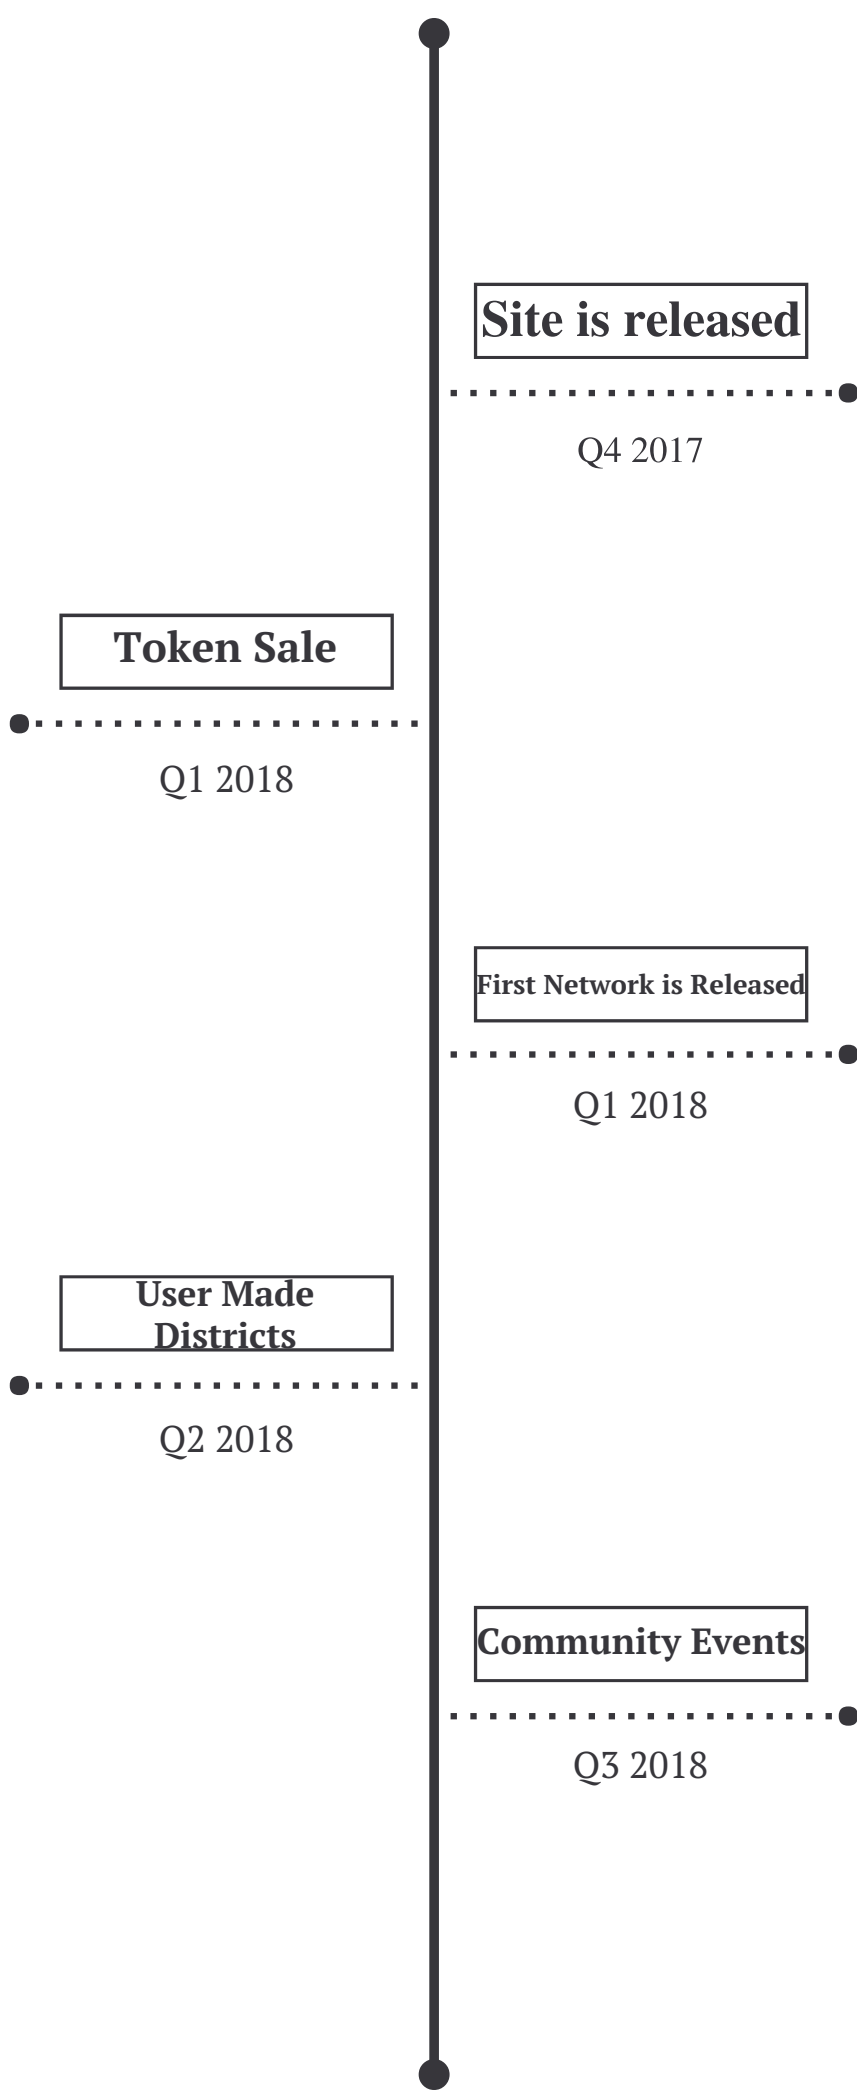

Our infrastructure will include Ethereum Smart Contracts and our own layouts and templates that will give each network its baseline functionality.

Since we will have a vast array of different Networkx, the Networkx team will continuously make, and modify templates and layouts so users can always have a selection to choose from. This will also allow the the creation of a network to be hassle free and quite simple.

Networx Token

To ensure security and durability the Networx Team brings forth Networx (NWX.) An ERC20 Token that will allow users to buy, sell, and participate in community events using our token.

Summary

Networkx is striving to be the platform where users can create anything they would like with as little hassle as possible. We are content with the current state of decentralization but we are looking to expand it even further. We are fed up with big companies not allowing their users have any say. Networkx is for the people, made by the people. Under no circumstances will we breach that policy.

Acknowledgements

We want to express our gratitude to the citizens of the internet. We have heard your complaints, we have heard your stories, and we have witnessed your frustration. We empathize with you. You are the reason behind this creation and you will be the driving force. We thank you for your innovative ideas, and your support. Together we can and will go far.

- The Networx Team
